SANAZ MAHMOUDI

Senior Front-End Developer

mahmoudisanaz.dev@gmail.com | +989035586187 | linkedin.com/in/sanaz-mahmoudi

SUMMARY

Senior Frontend Developer with 6+ years of experience building scalable web applications, specializing in React.js and Next.js. Experienced in frontend architecture, server-side rendering, and performance optimization, with a focus on maintainability, rendering strategies, and reliable application design. Combines strong technical problem-solving skills with a collaborative approach to engineering and team mentoring.

EXPERIENCE

Senior Frontend Developer — Confidential (NDA)

Dec 2025 - Present | Canada (Remote)

An MVP for A peer-to-peer equipment rental marketplace (name withheld under NDA) connecting lenders and borrowers with bookings, secure payments, and verified item handoffs:

- Designed a **hybrid rendering architecture** for public and authenticated experiences, using **Next.js Server Components** for **SEO-sensitive** pages and **SWR** for fresh, user-specific data, balancing speed and personalization.
- Established the **URL as the single source of truth** for marketplace search state, coordinating filters, location, dates, map bounds, results, and infinite scrolling, with debounced, viewport-bounded queries to limit API calls.
- Hardened frontend authentication and the API layer against concurrent failures with **single-flight token refresh** and centralized **error normalization**, so parallel requests share one refresh operation and the UI receives backend-specific error responses through a consistent contract.
- Designed a resilient **real-time** communication layer around **SSE**, managing connection lifecycle, authentication failures, and network interruptions through controlled retries, **exponential backoff**, and **jitter** to prevent duplicate connections and reconnect storms.
- Designed **state-driven rental workflows** with explicit lifecycle states, transition rules, and failure handling across approval, identity verification, payments, fulfillment, cancellations, and dispute resolution, maintaining consistent behavior across borrower and lender journeys.
- Architected a scalable frontend architecture with clearly defined boundaries between global client state (**Redux Toolkit**), feature-level state (**Context**), and remote server state (**SWR**); established reusable UI abstractions and shared component patterns with **MUI** and **SCSS** to improve maintainability and consistency across product features.

Senior Frontend Developer — Socious

Sep 2023 - Dec 2025 | Tokyo, Japan (Remote)

A social impact platform connecting professionals and organizations to collaborate on purpose-driven projects using blockchain-based rewards:

- Integrated **Mesh.js** to extend the custom wallet connection system, enabling **Cardano** wallet access via **social accounts** in the **Socious Fund** project.
- Developed a custom multi-wallet connection system using **Ethers.js**, **Wagmi**, and the **Cardano SDK**, enabling users to connect and transact seamlessly with both installed **EVM** and **Cardano** wallets.
- Recognized payments required saved-card support with visible failure states — integrated **Stripe** to surface cards and process transactions against the selected method, surfacing declines inline via the shared error layer.
- Managed **Cloudflare** environment variables and deployment processes, keeping staging and production consistent.
- Built an **Account Center** for Socious Identity, owning the UI/UX of secure self-service identity management.
- Led frontend development across three major **Socious** products — **Socious Wallet**, **Socious Verify**, and **Socious Fund** — driving most modules from design to delivery.

Frontend Developer — Hamrah Mechanic

Dec 2020 - May 2023 | Tehran, Iran

Iran's first automotive marketplace delivering trusted car inspections, price evaluations, and buy/sell services, with 1M+ app downloads:

- Spearheaded the initial build with **Next.js**, writing readable, maintainable code in **TypeScript**.
- Introduced **CI/CD** with **Docker** and **Docker Compose**, containerizing the app for consistent builds and deployments.
- Developed **Khaos-Admin**, an open-source framework built with **Ant Design** and published on **npm**, offering a streamlined, customizable alternative to React-Admin for rapidly building admin panels.
- Accelerated performance by optimizing images and lazy loading, increasing the **Lighthouse** score by 25%.
- Automated API integration by developing a **Bash script** to merge multiple Swagger specifications into TypeScript definitions using **OpenAPI**, streamlining the development workflow.
- Proposed and implemented UI/UX and performance improvements with the design team, driving a **30%** increase in site visits, and collaborated with back-end developers to resolve issues, improving user experience metrics by 20%.

Frontend Developer — BtcEX

Jul 2020 - Dec 2020 | Ottawa, Ontario, Canada (Remote)

A full-category cryptocurrency exchange offering spot, derivative (futures & options), and leveraged trading with global users and high liquidity:

- Revamped the codebase by implementing a structured architecture based on **Atomic Design** principles.
- Implemented **Husky** pre-commit hooks and configured **ESLint** and **Prettier**, enforcing code quality and consistency.
- Integrated the **WebSocket API** to fetch order books, volumes, latest transactions, and candlestick data.
- Contributed to the hiring process by designing assessments and evaluating candidates, onboarding **20+ top talents**.

SKILLS

Programming Languages: TypeScript, JavaScript
Frontend Development: React.js, Next.js, Redux Toolkit, Redux, Redux Thunk, Context API, HTML, CSS, SCSS, Tailwind CSS, Bootstrap, Material UI (MUI), Styled Components, JSS, jQuery
Testing & UI Development: Storybook, Cypress
Build Tools & Monorepo: Webpack, Esbuild, Lerna
Web3 & Blockchain: Web3, Ethers.js, Wagmi, Cardano, Mesh.js, WalletConnect
API & Communication: RESTful APIs, WebSocket APIs, Server-Sent Events (SSE), OAuth
Maps & Geospatial: Google Maps API, Leaflet
DevOps & Development Tools: Docker, CI/CD, Git, ESLint, Prettier, Husky

EDUCATION

University of Science and Culture

2015 - 2019 | Tehran, Iran

Bachelor of Software Engineering

LANGUAGES

Persian — Native proficiency

English — Professional working proficiency

German — Elementary proficiency
